STUDENT PORTAL

Run your tutoring centre from one place.

Students, class calendars, attendance, fees, parent communication and progress feedback in one simple web app, with a built-in AI assistant that works on your centre's own data.

Class Calendar · Attendance · Automatic Fees · Email & SMS · AI Feedback Writer · Ask-your-data AI

Prepared for Best Brains Franchise Development · Tarun Gupta

AT A GLANCE

Everything a centre needs, connected

Each part of the system feeds the next. Classes put on the calendar become attendance days, attendance and the calendar drive the monthly fees, and parents are kept informed automatically, so one change updates everything.

Students & batches

One record per student: grade, school, guardian, contacts, batch, enrollment date and per-class rate. Default rates by grade.

Class Calendar

A monthly calendar per batch. Add a class, or repeat a weekly pattern for the whole month in one step.

Attendance

Scheduled days appear automatically. Mark Present or Absent in one click; unmarked past classes are highlighted.

Fees & payments

Monthly fees are calculated from the classes scheduled × rate. Track payments, partial payments and credits, and export to Excel.

Parent communication

Monthly schedules, automatic class reminders, change notices and fee reminders by email and SMS, personalised with each child's name.

Progress feedback

Monthly topics, improvement areas and achievements, with an AI writer that turns rough notes into parent-ready feedback.

Ask your data

Ask "Who still owes fees?" or "Which classes are next week?" in plain English and get answers with links to the source.

Dashboard

Billed vs. collected, outstanding balance, collection rate and attendance %, month by month.

Less admin

Scheduling, attendance, billing and reminders are linked, so there's no re-typing and no spreadsheets.

Happier parents

Timely reminders, schedules and clear monthly feedback, sent automatically.

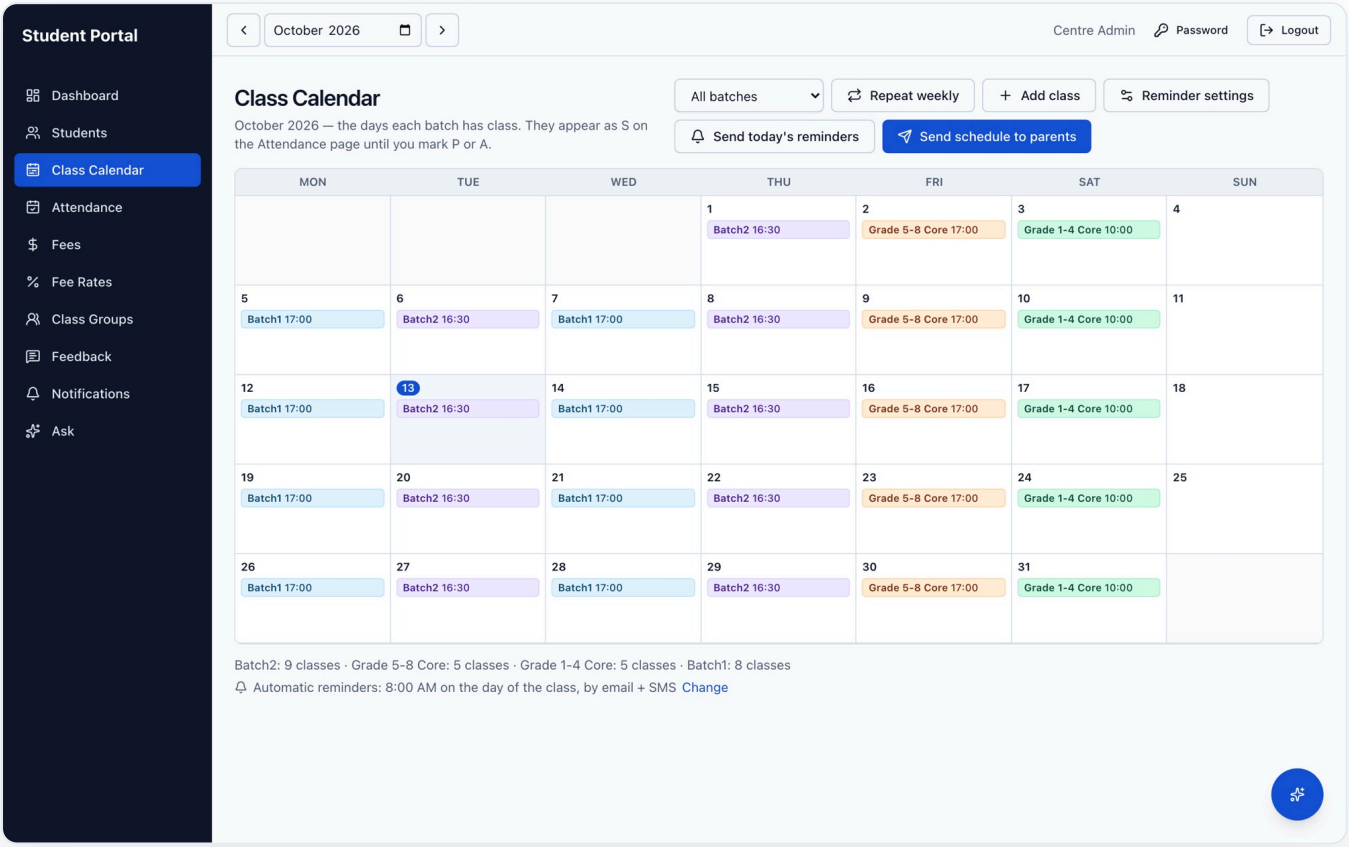

Private by design

Secure admin login. The AI model runs on the centre's own computer.

PLAN THE MONTH

Class Calendar

Build each batch's month in seconds with "Repeat weekly", then send the full schedule to every family with one click.

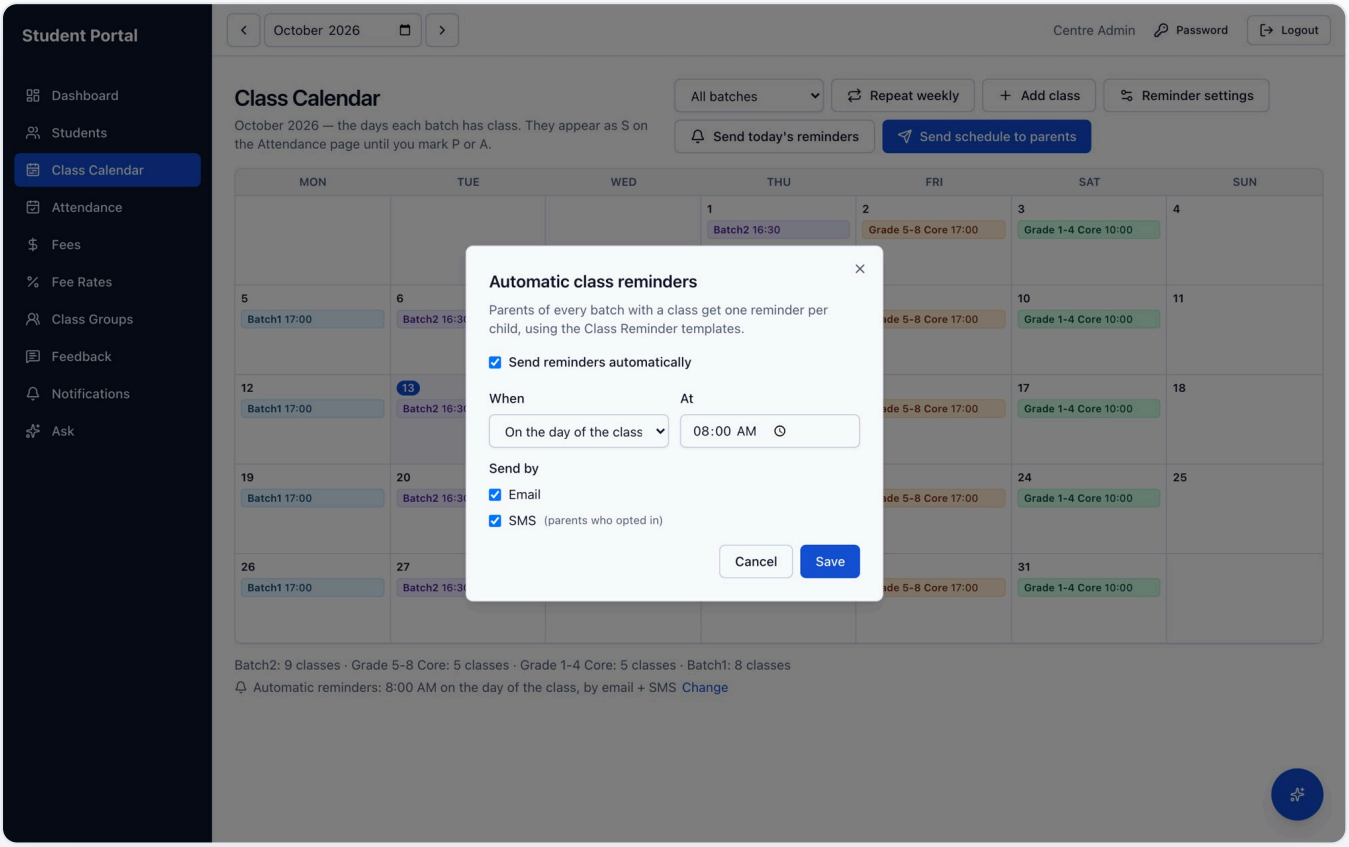

1. **Colour-coded batches**: see every class for the month at a glance, or filter to one batch.
2. **Send schedule to parents**: a personalised monthly timetable for each child, by email and SMS.
3. **Change notices**: move or cancel a class and the app offers to tell the affected parents, only after you confirm.
4. **Send today's reminders**: one button for a manual reminder whenever you need it.

1 click **Why it matters:** the calendar is the single source of truth. Attendance days, monthly fees and parent reminders all come from it automatically.

NEVER MISS A CLASS

Automatic reminders

Choose when reminders go out (on the day of the class, the day before, or two days before) and at what time. The app does the rest, once a day, with each child's name in the message.

- **Email and SMS**: SMS goes through an Android phone gateway, with no costly bulk-SMS contract.
- **Editable templates** for reminders, schedules, change notices and fee reminders.
- **Full history** of every message sent, with one-click retry for failures.
- **Respects opt-ins**: SMS only to parents who have agreed to it.

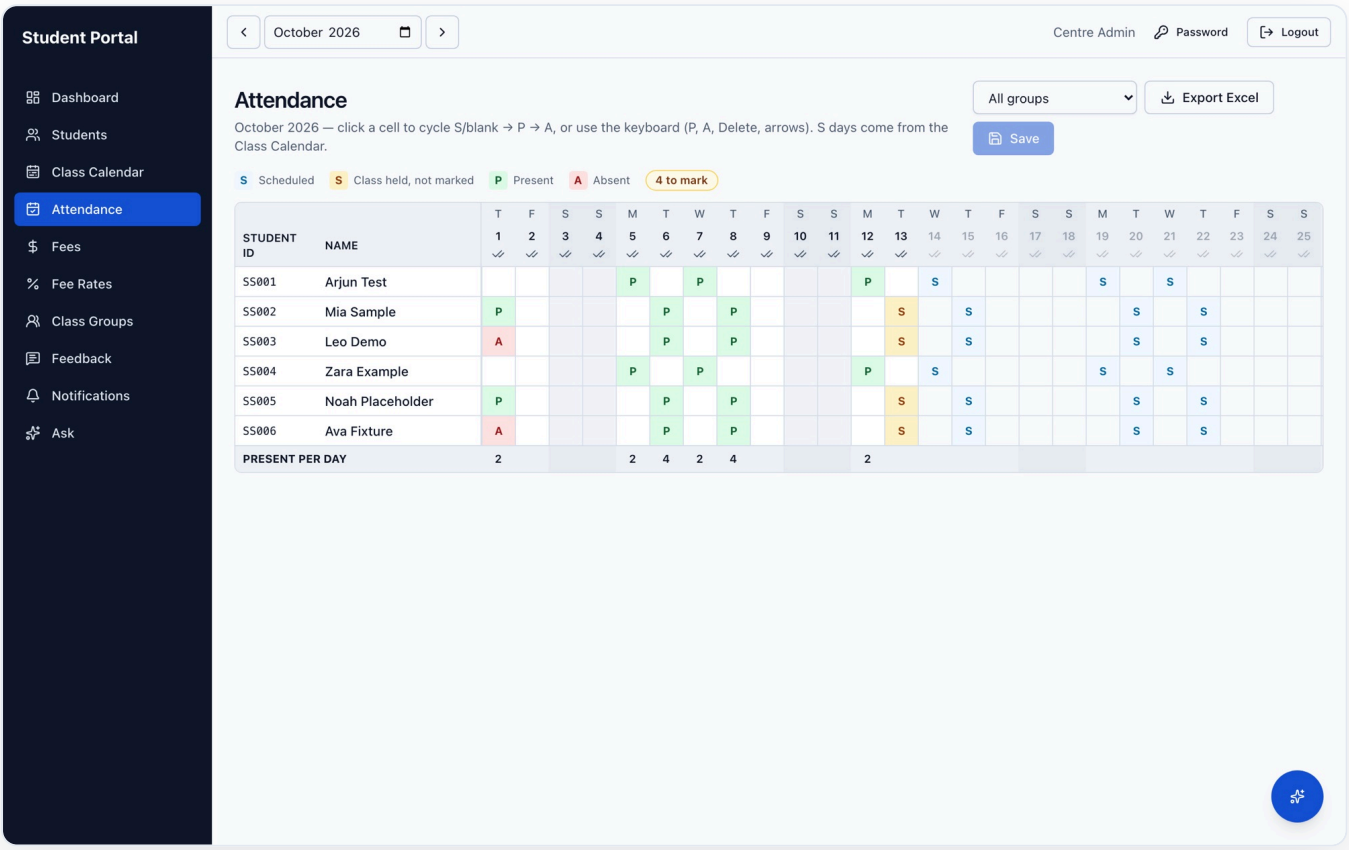

0 calls

Why it matters: fewer missed classes and fewer "what time is class?" calls. Reminders go out even when the admin is busy teaching.

TRACK EVERY CLASS

Attendance

Scheduled days come straight from the Class Calendar. Click a cell to mark Present or Absent, use the keyboard, or mark a whole batch present at once. Days that have passed but aren't marked yet stand out in amber.

- **Scheduled** (blue): upcoming classes, shown automatically.
- **Attendance % per student** and per month on the dashboard.
- **"To mark" counter**: nothing slips through the cracks.
- **Export to Excel** for records or head-office reporting.

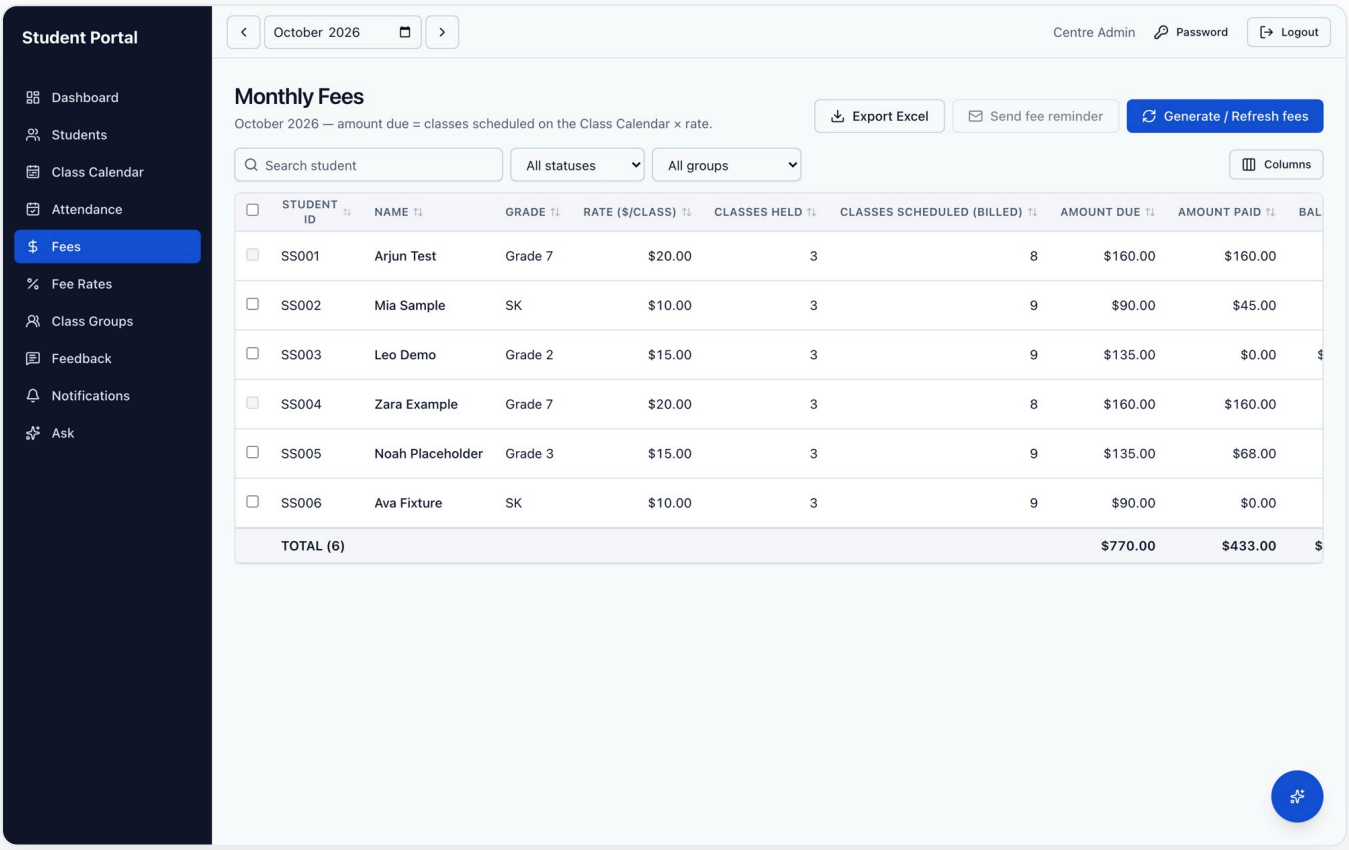

Seconds

Why it matters: marking a whole batch takes seconds, and the "to mark" badge means records are complete before fees go out.

GET PAID ON TIME

Monthly fees & payments

Fees are generated for every active student from the classes on the calendar × their rate, and they update automatically when the calendar changes. Record cash, e-transfer, cheque or card payments and see what's outstanding instantly.

- **Paid / Partial / Unpaid / Credit** status worked out automatically.
- **Fee reminders** to selected families in one click.
- **Rates by grade**, with a per-student override; past bills keep their rate.
- **Excel export** of the month's fee sheet.

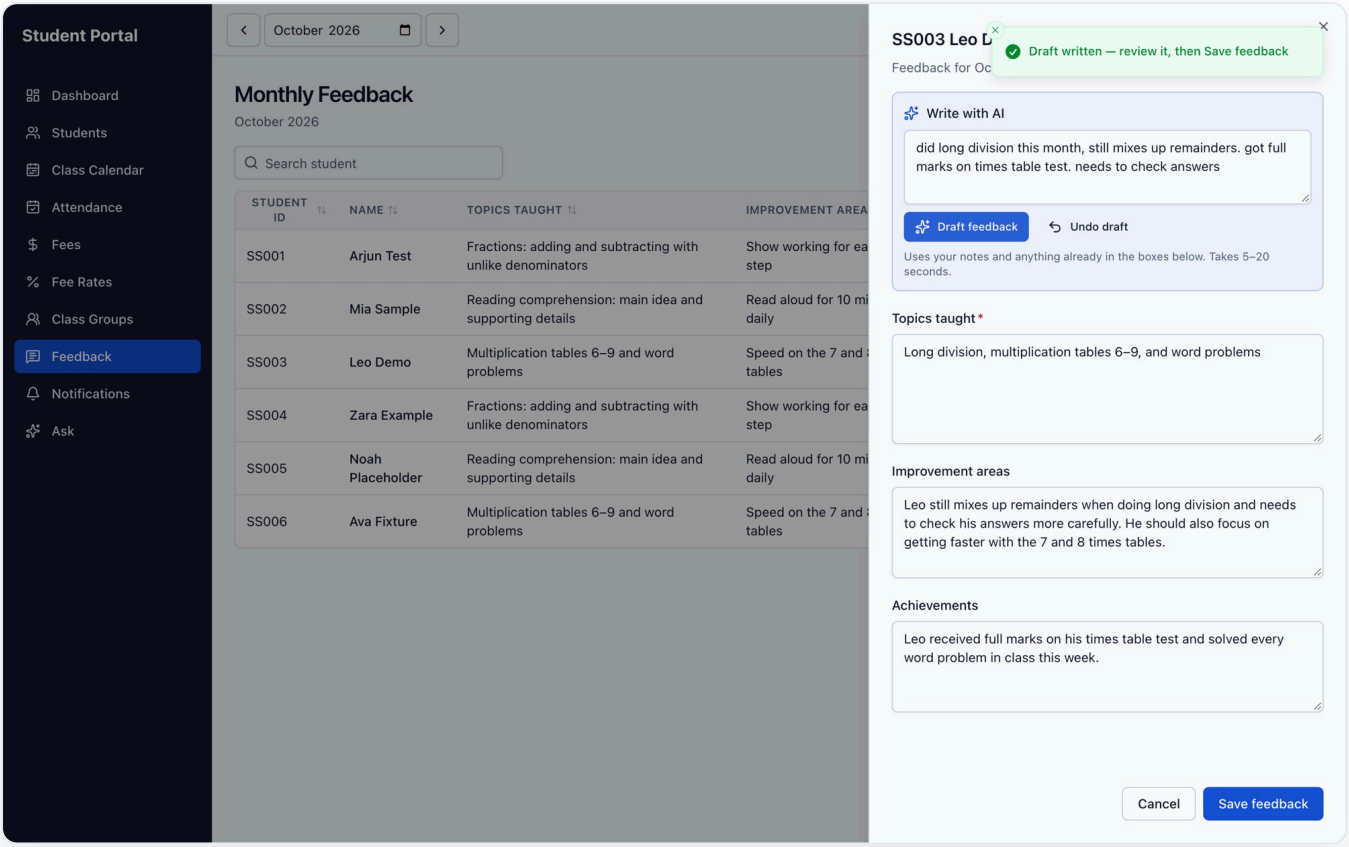

No sheets

Why it matters: no spreadsheets or manual totals. Bills, balances and reminders are always consistent with the calendar.

COMMUNICATE PROGRESS

Monthly feedback, written with AI

Teachers jot down quick notes. The AI turns them into clear, well-written feedback in three parts (topics taught, areas to improve, achievements), ready to review, save, email or print for parents.

- **Rough notes in, polished feedback out**, in seconds.
- **Teacher stays in control**: review, edit, or undo the draft before saving.
- **Email or print** a monthly report for each student.
- **Copy topics** from the previous month to save time.

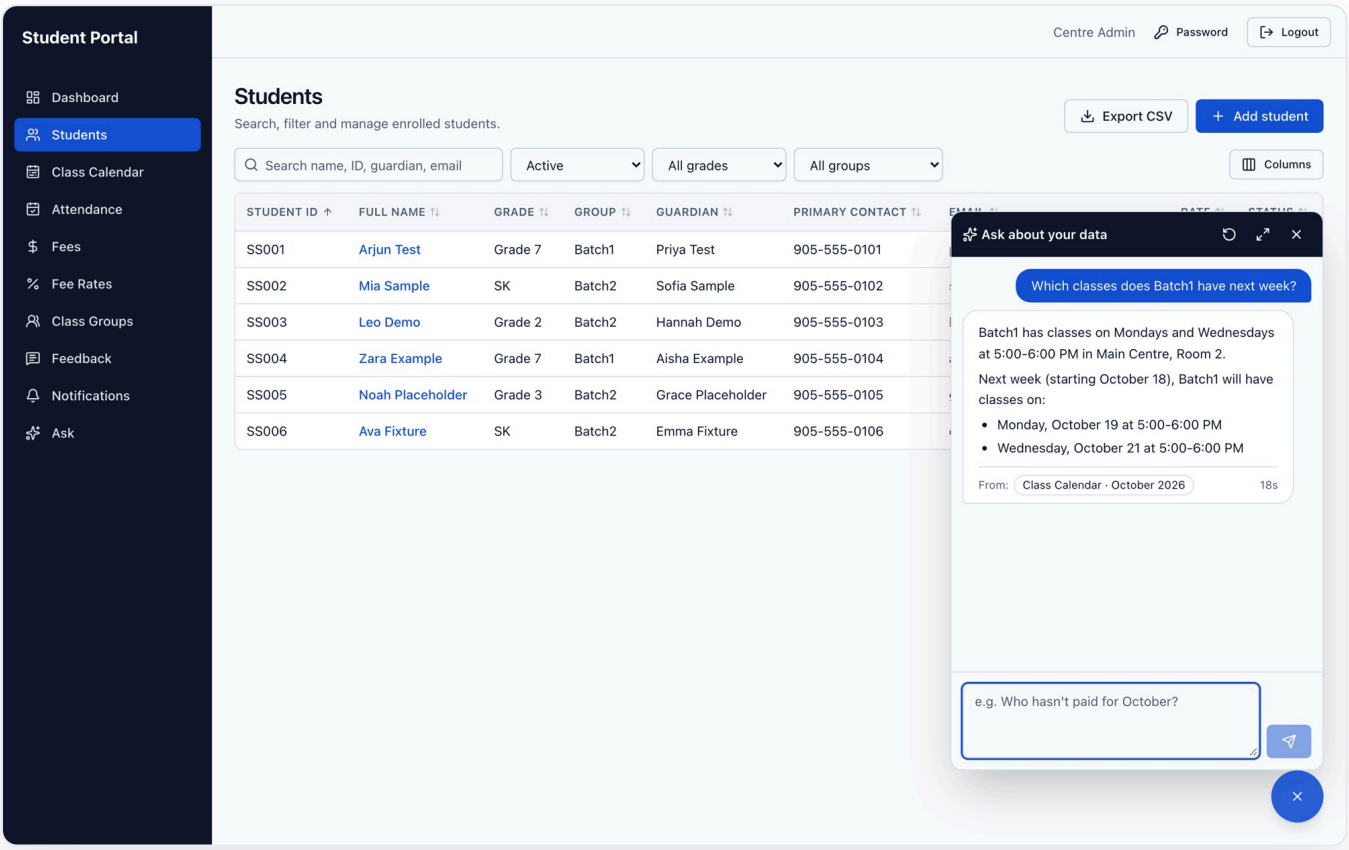

Minutes saved

Why it matters: writing feedback for a full batch goes from an evening's work to a few minutes, and the quality stays consistent across teachers.

BUILT-IN AI ASSISTANT

Just ask your data

A chat assistant, available as a full page or a pop-up on any screen, answers questions about students, fees, attendance, feedback and the calendar. Every answer links to the page it came from. The AI model runs locally, so student information stays on the centre's computer.

The pop-up assistant works from any page. Here it was asked "Which classes does Batch1 have next week?"

- **Plain-English questions** such as "Who still owes fees for October, and how much?"
- **Private**: runs on a local AI model; no student data is sent to the cloud.
- **Answers cite their source**, e.g. "Fees · October 2026".
- **Dashboard** for the numbers: billed, collected, outstanding and attendance.

Instant

Why it matters: owners and managers get answers in seconds without learning reports, which is ideal for quick checks before a parent call.

One consistent system for every franchise

- ✓ Saves every centre hours of admin each month on scheduling, attendance, billing and parent updates.
- ✓ Consistent parent experience across centres: the same reminders, schedules and feedback format.
- ✓ Predictable fee collection with clear balances and one-click reminders.
- ✓ Can be adapted to Best Brains branding, curriculum levels and multi-centre reporting.
- ✓ Secure, simple to learn, and private: the AI runs on the centre's own machine.
